EDUCATION

Columbia University

Master of Science in Computer Science, Machine Learning track

New York, NY
Expected Dec 2027

Chulalongkorn University

Bachelor of Engineering in Computer Engineering, GPA: 3.73/4.00, First Class Honours

Bangkok, Thailand
Aug 2019 – May 2023

- No. 1 University in Thailand by QS World University Rankings 2026
- Thesis: End-to-End Machine Learning Lifecycle Management Platform
- Relevant Coursework: Computer Vision, Pattern Recognition, Data Structures and Algorithms

EXPERIENCE

Senior Software Engineer

Arise by INFINITAS (subsidiary of Krungthai Bank, 2nd largest bank in Thailand by assets)
CLICX Bank - Thailand's first virtual bank (neobank)

May 2024 – Aug 2026
Bangkok, Thailand

- Led a 5-person SWE team in designing and implementing backend services and APIs for the user-onboarding and bank-account-opening journeys of the CLICX mobile app using Go, Kafka, Redis, MongoDB, and PostgreSQL
- Owned the end-to-end lifecycle of onboarding APIs, including go-live, production monitoring, and incident investigation
- Reduced response latency across onboarding APIs from approximately 2 seconds to 20 milliseconds by improving caching and optimizing MongoDB indexes for per-user onboarding documents

Software Engineer Team Lead

Protomate

Jan 2023 – Feb 2024
Bangkok, Thailand

Thai startup developing connected, AI-enabled motorcycle helmets to improve rider safety

- Led the entire software engineering team (7-person) responsible for implementing the integrated software platform for Thailand's first smart helmet, its Flutter mobile app, and nRF-based remote control
- Managed project requirements and timelines, and aligned roadmap priorities with mechanical and electrical engineering leads
- Designed device-to-app connectivity using Bluetooth Classic and BLE, implemented Secure Boot, and integrated the mobile app and remote control with custom Android firmware

Machine Learning Engineer Intern

OxygenAI

June 2022 – July 2022
Bangkok, Thailand

AI company building computer-vision products for retail and smart-city

- Researched the problem of object detection in fisheye images without dewarping them first which faced the challenges from lens distortion and varying object orientations
- Developed a computer vision model by modifying YOLOv5 to correct bounding-box orientation using rotation-aware regression

PROJECTS

Rainfall Nowcasting on Thai Department of Drainage and Sewerage Radar Data

May 2022

Data Science and Engineering Project

- Developed a real-time rainfall nowcasting system for Bangkok with an end-to-end data pipeline and dashboard using GCP (Cloud Functions, Pub/Sub, Cloud Storage), TensorFlow, Folium, and Power BI
- Led the team to train and develop optical flow, ConvLSTM, and RainNet (autoencoder) models using TensorFlow and Keras, achieving MSE of less than 0.001 on radar- and wind-data scraped from DDS data

Vehicle Detection and Counting

Jul 2021

Individual Research Study on Machine Learning

- Built a Mask R-CNN system to detect and segment vehicles and estimate traffic volume from CCTV data using PyTorch and OpenCV, achieving 60.2% box AP50 and 56.6% mask AP50

AWARDS & HONORS

RoboCup@Home 2022, Open Platform League — World 1st Runner-up

- Built "Walkie," a household service robot. 11 teams from 7 countries qualified for the final
- Implemented pre-labeling models for the open-vocabulary object detection tasks using ViLD method (Vision and Language Knowledge Distillation). Assisted the sub-team in implementing person-tracking and pose-estimation algorithms

TECHNICAL SKILLS

ML Libraries: PyTorch, TensorFlow, NumPy, pandas, Matplotlib, OpenCV

Languages: Python, Go, Kotlin, Java, C/C++, SQL (Postgres), TypeScript, JavaScript

Frameworks: FastAPI, Gin, Fiber, Spring, React, Next.js, Node.js

Developer Tools: Git, Docker, AWS, Google Cloud Platform, Claude Code, Codex, VS Code
